Chidinma Patricia Igbokwe

Customer Success | Customer Experience | Client Onboarding | Customer Operations

Helping businesses turn new users into successful, confident, and long-term customers.

I am a Customer Success and Customer Experience professional with 7+ years of experience supporting customers across AI SaaS, healthcare, telehealth, and e-commerce.

My experience covers the customer journey from first interaction and onboarding to product education, troubleshooting, adoption, proactive engagement, and retention.

I enjoy understanding what customers are trying to achieve, identifying what is getting in their way, and helping them get the most value from the products and services they use.

I approach customer success as more than resolving tickets. It involves understanding customer needs, identifying risks early, communicating clearly, coordinating with internal teams, and ensuring that customers receive the support they need to succeed.

Core experience

- 700+ users onboarded through personalised onboarding and product guidance.
- High-volume customer support across email, chat, and calls.
- Customer onboarding, product education, and follow-up.
- Customer feedback collection and cross-functional collaboration.
- Healthcare and telehealth customer support.
- Customer issue ownership, troubleshooting, and escalation.

---

1. About Me

Great customer experiences do not happen by chance. They are built through clear communication, consistent follow-through, attention to detail, and an understanding of what customers need to succeed.

Over the years, I have worked with customers at different stages of their journey: people exploring a product for the first time, customers struggling with a particular feature, users who need additional guidance, and existing customers who require ongoing support.

My work has taught me that a customer may contact support because something is not working, but the underlying issue may be a lack of product understanding, an onboarding gap, an unclear process, or an unmet expectation.

That is why I try to look beyond the immediate question.

I focus on:

- Understanding the customer's actual problem before recommending a solution.
- Making complex products and processes easier to understand.
- Helping customers complete important setup and onboarding activities.
- Identifying blockers that may affect product adoption.
- Following up to ensure that issues have been resolved.
- Sharing recurring customer feedback with the teams responsible for improving the product or service.
- Creating a customer experience that builds confidence and trust.

My Customer Success Philosophy

Empathetic, not transactional. I want customers to feel heard and understood.

Clear, not overwhelming. Product guidance should make customers more confident, not more confused.

Proactive, not reactive. I believe in identifying potential problems before they become reasons for disengagement.

Accountable, not just responsive. A response is not the same as a resolution. I value ownership and follow-through.

---

2. What I Do

Customer Onboarding and Activation

- Guide new customers through product setup and initial configuration.
- Conduct personalised onboarding sessions and product demonstrations.
- Explain product features, integrations, and workflows.
- Identify onboarding blockers and help customers move forward.
- Provide follow-up guidance to encourage successful product adoption.

Customer Success and Retention

- Maintain customer relationships through proactive communication.

- Conduct customer check-ins to understand progress and challenges.
- Identify adoption gaps and opportunities for additional guidance.
- Recognise potential disengagement signals and recommend appropriate interventions.
- Help customers understand how to get more value from a product.

Customer Support and Experience

- Handle customer inquiries through email, live chat, and phone.
- Investigate issues and provide clear, practical solutions.
- Support account access, billing, scheduling, payments, and platform navigation.
- Manage customer expectations during unresolved issues.
- Escalate technical or operational problems to the appropriate teams.
- Follow up with customers until there is a clear resolution or next step.

Customer Operations and Process Improvement

- Maintain accurate customer records and interaction notes.
- Identify recurring issues and communicate customer feedback internally.
- Coordinate with product, technical, operations, and support teams.
- Use CRM and support platforms to organise customer information.
- Identify opportunities to improve onboarding, communication, and support processes.

---

3. Professional Experience

Fyxer AI / Pickle

Customer Success Specialist | Client Onboarding and Customer Support
Remote | May 2025 – December 2025 | Contract

Fyxer AI is an AI-powered executive assistant product. My role focused on helping customers understand the product, complete onboarding, and become confident using its features.

What I did

- Onboarded more than 700 users through personalised onboarding sessions.
- Conducted one-to-one video calls to guide customers through product setup and configuration.
- Explained product features, integrations, and workflows based on individual customer needs.
- Helped users understand how to incorporate the product into their daily work.
- Provided ongoing customer support through chat and support channels.
- Managed a high volume of customer inquiries and troubleshooting requests.

- Conducted follow-up check-ins to understand customer progress and address outstanding questions.
- Identified technical blockers and escalated them to the relevant internal teams.
- Shared customer feedback and recurring issues with product and support colleagues.

My approach

I treated onboarding as the beginning of the customer relationship rather than a one-time demonstration.

I focused on understanding what each customer wanted to achieve, showing them the features relevant to those goals, and making sure they knew how to use the product after the session.

Where a customer experienced difficulty, I provided additional guidance or escalated the issue when necessary. Follow-up conversations helped me understand whether customers were making progress and whether they needed further assistance.

Selected evidence

- 700+ users onboarded.
- Approximately 90% CSAT in previously reported role metrics.
- High-volume support handling, including 50+ tickets per shift in reported periods.
- Positive customer and team feedback on onboarding clarity, product education, and follow-up.

Wellnite

Customer Experience and Support Agent | Sales Development and Acquisition Team Leadership
Remote | August 2021 – November 2024

Wellnite is a US-based mental health and telehealth platform connecting customers with healthcare services.

I worked across customer support, appointment setting, and sales development, gaining experience in both customer-facing operations and team coordination.

Customer Experience and Support

- Supported customers with appointment scheduling and rescheduling.
- Assisted with account access, billing, payments, and platform navigation.
- Helped customers understand insurance-related processes and provider information.
- Handled customer inquiries through multiple communication channels.
- Worked with healthcare-related platforms and portals, including Availity, pVerify, and the Cigna provider portal.
- Managed sensitive customer information with appropriate care and confidentiality.

- Followed up on customer issues and coordinated with relevant teams to resolve outstanding concerns.

Sales Development and Acquisition

- Worked as an SDR and appointment setter from August 2021 to September 2022.
- Progressed into a Manager, Sales Development / Acquisition Team role in August 2022.
- Supported customer acquisition and appointment-setting activities.
- Helped coordinate sales development processes and customer interactions.
- Worked with team members to maintain communication and improve the customer acquisition experience.

My approach

Working in healthcare taught me the importance of empathy, clarity, and accuracy. Customers may already be dealing with stressful circumstances, so I made an effort to explain processes clearly, avoid unnecessary confusion, and ensure that their concerns were handled appropriately.

My experience across support and acquisition also helped me understand the importance of the customer's experience before and after conversion.

Kiara House

Customer Service Representative
March 2019 – June 2021

Worked with customers of an interior décor business, supporting them throughout their purchasing journey.

Responsibilities

- Responded to customer inquiries through live chat and other communication channels.
- Helped customers understand products and make purchasing decisions.
- Assisted with order inquiries, delivery updates, and post-purchase concerns.
- Handled customer complaints, refunds, and service-related issues.
- Collected customer feedback and communicated recurring concerns.
- Supported a positive customer experience from product discovery to post-purchase support.

What this experience developed

This role strengthened my ability to understand customer expectations, communicate product information, manage service issues, and support customers through a complete purchasing journey.

Byeolhas Nigeria Limited

Customer Service and Administrative Support
July 2016 – September 2017

- Responded to customer inquiries through phone, email, and in-person interactions.
- Assisted with administrative and customer service processes.
- Maintained records and organised customer-related information.
- Supported issue resolution and customer follow-up.
- Helped improve documentation and administrative processes.

---

4. Selected Case Studies

The following projects demonstrate how I approach customer success challenges, analyse customer problems, design interventions, and define measurable outcomes.

These are case-study projects and proposed solutions, not claims of production deployments or achieved business results.

Case Study 1: Sunrise Digital Microfinance Bank

Building a Customer Experience Automation Hub to Improve Onboarding, Activation, and Service Recovery

Project focus: Customer onboarding | Customer activation | Transaction recovery | Voice of Customer | Customer operations

The Business Challenge

Sunrise Digital Microfinance Bank was experiencing customer journey challenges across onboarding, account activation, transaction support, and customer feedback management.

The research showed that customers were encountering friction at different stages of their journey, while feedback from multiple channels was not being brought together into one consistent process for identifying and addressing recurring problems.

As a Customer Success Manager approaching this challenge, I would not treat each complaint as an isolated support issue. I would first examine the full customer journey to understand where customers were struggling, what the available evidence showed, and which problems required immediate attention.

What the Research Revealed

Onboarding funnel

Onboarding stage	Customers	Conversion
App registration	42,600	100%
BVN/NIN verification	31,250	73%
Selfie/liveness verification	24,100	77%
Account tier and terms	19,870	82%
First deposit	9,340	47%
Active after 30 days	5,120	55%

The figures showed two important areas to investigate:

- The largest absolute customer loss occurred between registration and BVN/NIN verification.
- The sharpest proportional conversion decline occurred between account tier and terms and first deposit.

Only 21.9% of customers who registered reached the first-deposit stage. Of those who funded their accounts, 55% met the stated 30-day activity definition of at least two transactions.

The funnel highlighted where customers were dropping off. It did not, by itself, establish why they were leaving.

Customer Feedback and Pain Points

The research included customer stories and feedback from customer care, app-store reviews, social media, and branch or agent records.

Customer problem	Evidence from research	Customer success concern
Interrupted identity verification	Tunde lost his verification session	Customer may abandon onboarding when progress cannot be recovered
Unclear account tiers	Chiamaka did not understand tier names	Customers may struggle to make informed account decisions
No clear onboarding communication	Musa received no contact after registration	Customer may assume registration failed

Missing confirmation	Grace did not receive document receipt confirmation	Lack of reassurance and uncertainty about next steps
Delayed transfer and poor follow-up	Emeka reported a six-hour transfer delay and generic support response	Trust, financial confidence, and service recovery
Repeated logouts and re-verification	89 app-store reviews	Recurring authentication and usability concerns
Transfer failures and delayed reversals	112 customer care calls	Potential operational and financial service issues
Demand for human support	260 social media comments	Customers need an accessible route to human assistance
Preference for assisted onboarding	Branch and agent feedback	Digital-only onboarding may not meet every customer's needs

The feedback sources were fragmented. Their counts also represented different types of interactions and may include duplicate customer experiences.

My Approach as a Customer Success Manager

Step 1: Map the customer journey

I would map the customer experience from registration through verification, account creation, first deposit, and the first 30 days of product use.

This would help identify the moments where customers need reassurance, education, intervention, or human assistance.

Step 2: Separate evidence from assumptions

I would distinguish between:

- Confirmed findings supported by the research.
- Possible explanations that need further investigation.
- Unknowns that require additional customer or operational data.

For example, the low first-deposit conversion makes funding a priority for investigation, but it does not prove that unclear account tiers are the cause.

Step 3: Prioritise customer problems

I would prioritise issues using:

- Customer impact and severity.
- Number of customers affected.
- Frequency of recurrence.
- Risk to customer trust and retention.
- Operational effort and urgency.

Transaction issues involving customers' money would receive urgent attention, while onboarding friction and communication gaps would be addressed through coordinated improvement work.

Step 4: Design connected customer success workflows

Rather than creating disconnected notifications, I proposed a connected CX Automation Hub.

Proposed Solution: Sunrise CX Automation Hub

Workflow A: Onboarding and Activation Recovery

Problem: Customers may abandon registration when verification sessions are interrupted, next steps are unclear, or they cannot get assistance.

Proposed workflow

1. Detect inactivity during an unfinished registration process using a defined threshold.
2. Record the last completed onboarding stage and safe progress information.
3. Send an appropriate reminder through an available, consented communication channel.
4. When the customer returns, authenticate them and direct them to the last valid step.
5. If verification has expired, explain that a fresh attempt may be required.
6. Create a support case when repeated failures or a request for help is detected.
7. Close the onboarding recovery case when the customer completes the relevant process.

Additional customer experience improvements

- Provide clear explanations of account tiers, requirements, features, and applicable limits.
- Confirm important onboarding milestones.
- Explain what customers should do next.
- Provide an option to request human assistance.
- Offer assisted onboarding through an appropriate branch or agent channel.

Customer success outcome: Reduce avoidable onboarding abandonment and help more customers reach their first successful account activity.

Workflow B: Transaction Status and Recovery

Problem: Customers may not know what happened to a delayed or failed transfer, when a reversal is expected, or who is handling the issue.

Proposed workflow

1. Detect a transaction that meets an agreed delayed or failed transaction rule.
2. Retrieve the available transaction reference and status from an authorised source.
3. Create a case with the customer's issue, transaction reference, and relevant timestamps.
4. Assign the case to the appropriate Payments or Operations owner.
5. Notify the customer using verified status information.
6. Escalate overdue cases according to agreed severity and response rules.
7. Update the customer when the transaction is resolved.
8. Close the case only after the outcome has been confirmed.

Customer success outcome: Improve transparency, reduce uncertainty, strengthen service recovery, and prevent customers from having to repeatedly explain the same issue.

Important: A notification alone is not a resolution. The workflow must connect the customer to an accountable case owner and a confirmed outcome.

Workflow C: Voice of Customer Management

Problem: Feedback from calls, app reviews, social media, and branch interactions is fragmented.

Proposed workflow

1. Capture feedback in a central feedback inbox.
2. Record the source, date, issue, and relevant customer context.
3. Categorise feedback by theme, such as onboarding, verification, transactions, support, or account access.
4. Flag possible duplicates and recurring complaints.
5. Prioritise issues using severity, frequency, customer impact, and volume.
6. Assign actions to the appropriate internal team.
7. Track action ownership, deadlines, status, and resolution.
8. Close the loop with affected customers where appropriate.

Customer success outcome: Give the business a clearer understanding of recurring customer problems and a more consistent process for acting on feedback.

Proposed Operating Model

The three workflows would operate as one continuous process:

Capture → Classify → Consolidate → Identify Themes → Validate and Prioritise → Assign Ownership → Act → Measure

The purpose is to ensure that customer feedback does not stop at reporting. It should lead to an accountable action and a measurable improvement.

Suggested Ownership

Workstream	Primary owner	Supporting teams
Onboarding recovery	Customer Success / CX	Product, Engineering
Verification failures	Product / Engineering	CX, Compliance
Account tier education	Product / CX	Compliance
Transaction recovery	Payments / Operations	Engineering, CX
Human support escalation	Customer Support	CX, Operations
Feedback management	CX / Customer Success	Product, Operations, Support

Success Metrics

Area	Suggested measurement
Onboarding	Registration-to-verification completion
Onboarding recovery	Percentage of interrupted signups resumed
Activation	First-deposit conversion
Customer activation	Percentage completing at least two transactions within 30 days of funding
Transactions	Time to confirmed resolution
Service recovery	Percentage of overdue cases escalated appropriately
Customer support	Repeat contacts for the same unresolved issue
Voice of Customer	Feedback categorised and assigned to an owner
Action management	Percentage of priority actions completed by their deadlines
Customer experience	Customer satisfaction after issue resolution

Targets should be set after validating baselines, technical feasibility, and operational capacity.

Proposed Tools and Implementation

- **Figma:** Customer journey screens and clickable workflow demonstration.
- **Airtable:** Central records for onboarding cases, transaction issues, customer feedback, and action tracking.
- **Make or Zapier:** Workflow automation and notifications.
- **Google Sheets:** Sample datasets and performance tracking.
- **Dashboard:** Reporting on onboarding, recovery, customer issues, and action completion.

This is a proposed prototype architecture. It is not a claim that Sunrise's production banking systems have been integrated.

Key Risks and Controls

- Protect sensitive identity and financial information.
- Do not store BVN, NIN, passwords, PINs, or full card details in an unsecured prototype.
- Authenticate customers before restoring sensitive onboarding activity.
- Confirm transaction status from an authorised source before communicating outcomes.
- Use clear escalation rules to prevent unresolved cases from being marked complete.
- Validate automation triggers to avoid unnecessary reminders or duplicate cases.

My Key Takeaway

This project reinforced an important customer success principle: customer experience problems are often connected.

An onboarding issue can affect activation. A transaction issue can affect trust. Poor communication can turn a temporary problem into a retention risk.

A strong customer success process must connect customer feedback, operational ownership, timely intervention, and measurable outcomes.

Case Study 2: Okonkwo FinTech Solutions

Using Customer Health Monitoring and Proactive Engagement to Restore Product Adoption

Project focus: Customer health | Product adoption | Churn prevention | Proactive customer success | Workflow automation

The Business Challenge

Okonkwo FinTech Solutions provides BukkiBooks, a cloud-based accounting and invoicing product.

Ihuoma Fashion House had stopped reconciling inventory for five weeks after a new manager joined the business.

The issue was not simply that a customer had raised a support ticket. An important product workflow had stopped being used, and the change in personnel created a possible knowledge and training gap.

This presented a customer success risk because the customer was no longer receiving the full value of a key product feature.

My Initial Assessment

As a Customer Success Manager, I would first want to understand what had changed before recommending a solution.

Questions I would investigate include:

- When was the last successful inventory reconciliation?
- Which users previously completed this workflow?
- Did the new manager receive product training?
- Is the customer experiencing a technical issue or a knowledge gap?
- Are other important product features still being used?
- Has the customer contacted support about the problem?
- Is the customer aware of the impact of leaving inventory unreconciled?

I would avoid assuming that inactivity automatically means dissatisfaction or an intention to cancel.

Instead, I would treat it as a risk signal that requires validation.

Root Cause and Customer Impact

Based on the case information, the identified issue was a prolonged interruption in inventory reconciliation following a change in personnel without adequate product training.

Likely contributing factors

- New-user onboarding was not completed effectively.
- Knowledge of an important workflow was not transferred.
- There was no effective early-warning process for detecting prolonged inactivity.
- The customer needed targeted assistance to resume the workflow.

Potential business impact

- The customer may lose confidence in the product.
- An important accounting and inventory process may become less reliable.
- The product's perceived value may decline.

- Prolonged inactivity may increase the risk of disengagement or non-renewal.

These are potential consequences to investigate, not confirmed financial losses.

My Approach as a Customer Success Manager

Step 1: Identify the adoption gap

I would review product usage data to confirm which workflow had stopped, how long it had been inactive, and whether the inactivity was isolated or part of a broader decline in usage.

Step 2: Assess customer health

I would combine product usage signals with customer context rather than relying on one metric.

Potential health indicators include:

- Recency of inventory reconciliation.
- Frequency of key feature usage.
- Usage of other important product features.
- Recent support tickets.
- Changes in account users or administrators.
- Recent customer communication and feedback.
- Upcoming renewal date, where available.

Step 3: Reach out with context

I would contact the customer with a specific observation rather than sending a generic check-in.

The conversation would focus on understanding the new manager's experience, identifying what is preventing the team from reconciling inventory, and agreeing on the most practical next step.

Step 4: Provide targeted intervention

If the issue is a knowledge gap, I would arrange a personalised training session for the new manager.

The session would cover:

- Relevant account and workflow setup.
- How to complete inventory reconciliation.
- Common errors and how to resolve them.
- How the workflow supports the customer's business operations.
- Where to access future support and learning resources.

If a technical issue is discovered, I would coordinate with the support or product team rather than treating it as a training problem.

Step 5: Confirm adoption recovery

After the training, I would monitor whether inventory reconciliation resumes.

I would follow up with the customer to confirm that the workflow is working and that the team is comfortable completing it independently.

I would not consider the intervention successful simply because a training session had taken place.

The customer needs to demonstrate that the key workflow has resumed.

Proposed Customer Health Monitoring Workflow

Tools: Mixpanel, HubSpot, Zapier, and Slack or email.

Workflow

1. **Monitor:** Track the customer's use of important product features.
2. **Detect:** Identify when a key workflow has been inactive beyond an agreed threshold.
3. **Validate:** Check whether the inactivity is genuine and whether there are other relevant risk signals.
4. **Create:** Update the customer's health record in HubSpot and create a CSM follow-up task.
5. **Notify:** Alert the assigned CSM through Slack or email.
6. **Engage:** Contact the customer with a personalised message.
7. **Intervene:** Arrange training, troubleshooting, or product guidance based on the root cause.
8. **Monitor recovery:** Track whether the customer resumes the workflow.
9. **Close:** Record the outcome and update the customer's health status.

Example Customer Health Indicators

Signal	Possible interpretation	CSM action
Key workflow inactive for an extended period	Adoption risk	Investigate and contact customer
Sudden decline in product usage	Possible disengagement	Review account activity and check in
New administrator or manager	Potential training gap	Offer role-specific onboarding
Repeated support tickets	Possible product or process friction	Identify root cause and coordinate resolution

Important workflow resumes	Positive recovery signal	Confirm success and monitor consistency

Health status should be based on validated signals and agreed thresholds. A single inactivity event should not automatically classify a customer as a churn risk.

Suggested Success Metrics

Metric	What it measures
Inventory reconciliation recovery rate	Percentage of affected customers who resume the workflow
Time to intervention	Time between risk detection and CSM action
Time to adoption recovery	Time between intervention and resumed workflow
Key feature adoption	Continued use of important product features
Training effectiveness	Percentage of trained users who successfully complete the workflow
Customer health recovery	Change in health status after intervention
Customer engagement	Follow-up participation and ongoing product usage

Risks and Considerations

- Incomplete product tracking may produce misleading inactivity alerts.
- Customers may have legitimate reasons for using a feature less frequently.
- Excessive notifications can create alert fatigue.
- A health score may be inaccurate if it relies on too few signals.
- Training alone will not solve a technical product issue.

To manage these risks, I would validate the usage data, combine multiple signals, agree on thresholds, and make sure the CSM reviews the situation before taking action.

My Key Takeaway

Customer success should not wait until a customer complains or requests cancellation.

A decline in product usage can be an opportunity to understand what has changed, provide timely assistance, and restore the value the customer expected from the product.

This case study demonstrates how I would combine product usage data, customer communication, targeted training, and follow-up to improve adoption and reduce avoidable customer risk.

---

5. My Customer Success Management Framework

Across onboarding, adoption, support, and retention, I use a structured approach to customer success.

1. Understand

Understand the customer's goals, expectations, current experience, and desired outcomes.

2. Onboard

Help customers complete setup, understand the product, and reach their first meaningful outcome.

3. Activate

Identify the actions that demonstrate the customer is receiving value and help them achieve those milestones.

4. Monitor

Review customer engagement, product usage, feedback, support history, and potential risk signals.

5. Intervene

Provide personalised guidance, training, troubleshooting, or cross-functional escalation based on the customer's actual needs.

6. Measure

Track whether the intervention improved adoption, resolved the problem, or helped the customer achieve the intended outcome.

7. Improve

Share recurring feedback with internal teams and identify opportunities to improve the product and customer journey.

My guiding principle: Every customer interaction should move the customer closer to a successful outcome.

---

6. Skills and Tools

Customer Success and Customer Experience

- Customer onboarding and activation
- Customer relationship management
- Customer engagement and follow-up
- Product adoption and education
- Customer retention support
- Customer feedback management
- Customer issue ownership
- Customer journey improvement
- Cross-functional collaboration
- Customer communication

Support and Operations

- Multichannel customer support
- Live chat and email support
- Phone and video onboarding
- Ticket management
- Troubleshooting and escalation
- Appointment scheduling
- Billing and payment support
- Process documentation
- CRM data management
- Support workflow coordination

Tools and Platforms

Customer support and communication

- Intercom
- Zendesk
- Freshdesk
- OpenPhone
- Slack
- Gmail
- Outlook
- Microsoft Teams

CRM and customer management

- HubSpot
- Airtable
- LeadSquared
- Salesforce

Project and productivity

- Trello
- Microsoft Excel
- Microsoft Word
- OneDrive
- Google Workspace

I am comfortable adapting to new tools and workflows based on the needs of the business.

---

7. Testimonials and Feedback

The following feedback has been selected from customer reviews and team messages included in my previous professional portfolio. Names and identifying details have been omitted for privacy.

Onboarding and product education

A Fyxer AI customer described a one-to-one onboarding session as clear and confidence-building, noting that the explanation helped them feel comfortable using the product.

Proactive customer success

A customer appreciated a follow-up call that helped them discover additional product features and get more value from their subscription.

Customer feedback and collaboration

A colleague recognised my ability to guide new users through onboarding, capture meaningful customer feedback, and communicate it to product and support teams.

Attention to detail and teamwork

A former colleague highlighted my attention to detail, positive working relationships, and suitability for customer service-related roles.

Customer support and ownership

Team feedback also recognised my handling of customer calls, appointment scheduling follow-up, and ability to manage different types of customer questions with confidence.

---

8. Education and Professional Development

BSc Biochemistry
Godfrey Okoye University | 2012–2016

Professional development

- HubSpot CRM training
- Zendesk training and certifications
- IT support training

---

9. Portfolio Projects and Supporting Work

This portfolio is organised to make it easy to explore my professional experience and case-study work.

10. Let's Connect

I am interested in opportunities where I can contribute to customer onboarding, customer success, product adoption, customer experience, and customer operations.

I enjoy working with teams that value proactive customer engagement, thoughtful problem-solving, and continuous improvement.

If you are looking for someone who can help customers get started, understand a product, overcome challenges, and achieve meaningful outcomes, I would be glad to connect.
